

## TASK 04

### Point.java

```
import java.util.*;

class Point {

    int x,x1;

    int y,y1;

    int axis;

    public double res;

    public Point() {

        this.x = 0;

        this.y = 0;

    }

    Point(int axis) {

        this.axis = axis;

    }

    Point(int x1,int y1) {

        this.x1 = x1;

        this.y1 = y1;

        //System.out.println(toString());

    }

    void setXY(int x,int y) {

        this.x = x;

        this.y = y;

    }

    public double distance() {

        int x1 = 0;
```

```
int y1 =0;
res = Math.sqrt (((x-x1)*(x-x1)) + ((y-y1)*(y-y1)));
return res;

}
```

```
public double distance(int axis) {

    res = Math.sqrt (((x-axis)*(x-axis)) + ((y-axis)*(y-axis)));
    return res;

}
```

```
public double distance(int x1,int y1) {
    res = Math.sqrt (((this.x-x1)*(this.x-x1)) + ((this.y-y1)*(this.y-y1)));
    return res;

}
```

```
public String toString(){

    return("DISTANCE BETWEEN THE POINTS (" +x+" ," + y+") AND (" +x1+" ," + y1+") IS ..." +res);

}
```

```
}
```

### **Psolution.java**

```
import java.io.BufferedReader;
```

```
import java.io.IOException;
```

```
import java.io.InputStreamReader;
```

```
class Psolution {
```

```
    public static void main(String args[]) throws IOException {
```

```
        BufferedReader bf = new BufferedReader(new InputStreamReader(System.in));
```

```
        Point point = new Point();
```

```
        point.x = 3;
```

```
        point.y = 2;
```

```
        //point read
```

```
        //x = Integer.parseInt(bf.readLine());
```

```
        //y = Integer.parseInt(bf.readLine());
```

```
        System.out.println("1.DISTANCE FROM POINT(0,0)");
```

```
        System.out.println("2.DISTANCE FROM POINT(X)");
```

```
        System.out.println("3.DISTANCE FROM POINT(X,Y)");
```

```
        int choice = Integer.parseInt(bf.readLine());
```

```
        switch(choice) {
```

```
            case 1:
```

```
                //double res = Double.parseDouble(bf.readLine());
```

```
                //double res;
```

```
                //point.distance();
```

```
                System.out.println("DISTANCE IS .."+point.distance());
```

```
                break;
```

```
            case 2:
```

```
                System.out.println("GIVE VALUE OF AXIS");
```

```

        int axis = Integer.parseInt(bf.readLine());

        System.out.println("DISTANCE IS .."+point.distance(axis));

        break;
    case 3:

        System.out.println("GIVE THE POINT");

        int x1 = Integer.parseInt(bf.readLine());

        int y1 = Integer.parseInt(bf.readLine());

        point = new Point(x1,y1);

        double d=point.distance(x1,y1);

        System.out.print(point.toString());

        break;

    default: System.out.println("INVALID SELECTION");

    break;

    }

}

}

```

## OUTPUT

```

C:\Users\Suganya-Nandhini\Desktop>java Psolution
1.DISTANCE FROM POINT(0,0)
2.DISTANCE FROM POINT(X)
3.DISTANCE FROM POINT(X,Y)
3
GIVE THE POINT
2
1
DISTANCE BETWEEN THE POINTS (0,0) AND (2,1) IS ...2.23606797749979
